Report a data**Abstract of EP0306403**

The invention relates to flat-screen visualisation devices for displaying information. <??

>According to the invention the visualisation device is configured so as to offer on its front face a flat screen consisting of a part (21) made of dedicated liquid crystals, of a part (22) in the form of a matrix of non-dedicated liquid crystals, and of a keyboard (18) the meaning of whose keys is displayed by the matrix. Moreover, the matrix of non-dedicated liquid crystals (22) is addressed in such way as to increase the security of operation and the speed thereof. <??

>The invention is applicable in particular to devices for visualising an aircraft's flight parameters.
